PURPA seems like a great idea. WE NEED TO SUPPORT AND encourage more energy efficient, environmentally friendly production as a means of reducing emissions and dependence on other sources of energy.

Why aren't we already participating?

What is the down side of participating in this?

What are the long term cost impacts on the consumers at CEC?

Can you tell me how the Renewable Energy Act impacts and helps CEC customers?

Is CEC going to jump on this bandwagon?

Is it optional for CEC to participate in Renewable Energy Act, or is it required?

Thanks,

Carolyn and Mike Johnson
